

CONNECTING INDUSTRY TO OPERATIONAL AWARENESS

Diversified is enabling a digital future — connecting people, technology and experiences, where and when it matters most.

Today's energy companies are focused on implementing operational efficiencies, yielding sustained returns and maximizing investments in assets, infrastructure and people. From exploration to production, transportation to refining and distribution, innovative technologies that enable connectivity across the supply chain are critical in optimizing productivity, minimizing downtime and enhancing health and safety.

Leveraging deep expertise from our global technology specializations, Diversified offers comprehensive consultation, design-build and global support services across the oil, gas and petroleum sector. We know what's at stake. We understand the importance of the human factor and, with technologies emerging at the speed of change, harness the human imagination to drive digital innovation. We are Imagination Engineered.

Specialties

Diversified understands unique business challenges and emerging trends, enabling us to deliver custom solutions and architect the future for our clients.

INTELLIGENT TECHNOLOGY FOR SECURE GLOBAL OPERATIONS

Diversified integrates and maintains technology solutions across the U.S. and around the world.

ACCELERATE RESPONSE TIMES THROUGH ENHANCED SITUATIONAL AWARENESS

Diversified understands that accessing and utilizing critical visual information to create a common operating picture is paramount to your ability to respond to the dynamics of ever-changing situations. Our comprehensive solutions allow operators to instantaneously disseminate, communicate and act upon crucial data.

Command & Control Centers

- Local & Global Security
- Emergency & Mass Notifications
- Enterprise Infrastructure Monitoring
- Process Control
- Cybersecurity

Managed Services

- Remote Support
- Staff Augmentation
- 24/7 Helpdesk
- Technology Lifecycle Management

Operational Technology

- LAN/WAN Design, Layout & Implementation
- Data Centers & Software-Defined Networking
- Data Loss Prevention

Visual Communications

- Stakeholder Communication
- Media Relations
- Internal Communication & Training
- IPTV Networks

Collaboration Spaces

- Plug-and-Play Meeting Rooms
- Simulation & Immersive Suites
- Research & Development Labs
- Real-time Collaboration Suites

PROVEN EXPERIENCE

Diversified is a leading global technology solutions provider delivering a comprehensive suite of solutions connecting today's enterprises to the global marketplace. Our expansive team of industry experts partners with a diverse clientele, helping them achieve higher performance levels, enhance their operations, increase productivity and drive ROI.

National Grid

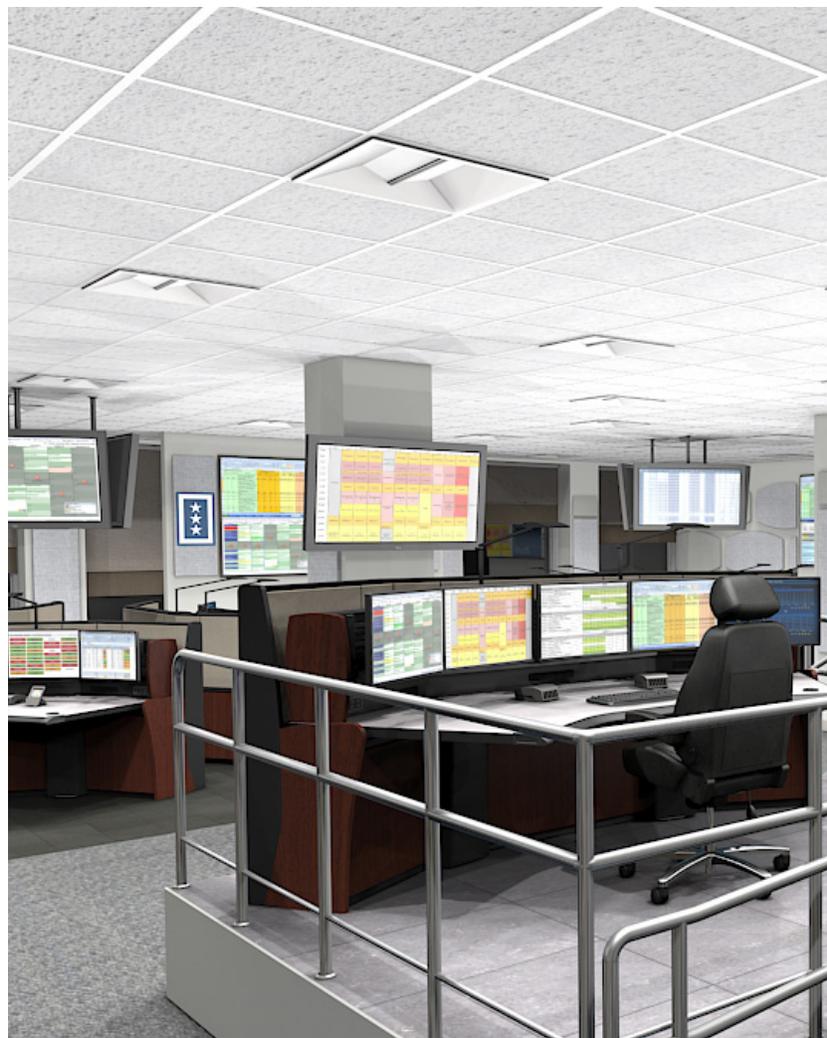

CONNECTING CLIENTS WITH POWERFUL TECHNOLOGY SOLUTIONS

Recognized for real-world operational experience, Diversified is a trusted partner to fulfill project needs from concept through deployment, delivering full-scale requirements implementation.

Powering Informed, Split Second Decisions with Visualization Tools

Whether servicing rural America or densely populated capital cities, we provide your control room operators and support personnel with scalable hardware and software solutions that allow them to make the key decisions required to keep critical processes operational.

Understanding varying needs, budgets and growth plans, we design spaces and solutions that maximize your workflow efficiencies, accelerate critical decision-making and minimize the margin of human error. The end result is a unique, scalable solution that helps to ensure the long term reliability of the critical systems that supply your communities with essential electricity, water/waste water and natural gas services.

ELECTRIC

Supplying reliable power presents many challenges. Regardless of whether this process is provided through Co-ops, Munis or IOU's, the provider's ultimate responsibility is to ensure constant, uninterrupted service to the consumer.

Get Electric Results

The key to success within utility control environments is understanding the importance of each operator's ability to react to a given situation whether operating within Generation, Transmission or Distribution.

GAS

From the gathering station to the end user, Control rooms within the natural gas market must monitor and maintain a consistent operational overview of the entire process. Informed decision making and enhanced collaboration are crucial to the operation.

Working Under Pressure

Critical within this environment is the need to constantly monitor for potential interruptions that may cause an outage or, even worse, loss of life. Situational awareness and the ability to operate efficiently are of extreme importance.

WATER

Distributing millions of gallons of clean water requires constant monitoring to ensure that our water supply remains safe and readily available for use by homes, businesses and emergency services. After water is distributed, sewage must then be processed.

H2O – It's a Formula

The formula for a successful control room deployment includes the ability to provide useful hardware and software solutions that enable control room operators to work efficiently and maintain the integrity of the systems required to maintain supply.
